HAND  MADE

ABOUT US

Bekay brushes was born in 1971 under the aegis of brothers *B.K. Ogal* and *R.C. Sood*.

Having been exporters of bristle to Europe and the USA, the brothers sought to diversify into brush manufacturing. As a result, the foundation of Bekay Brushes was laid.

Since then, the company has grown leaps and bounds and has now developed into a huge factory with state of the art machinery as well as housing a team of highly skilled workers.

BRUSHES MADE TO PERFECTION

We take care at every single step of the manufacturing process to create a vast range of precision brushes. Customer-satisfaction is the fundamental theme on which we function.

BRUSH MAKING IS AN ART

Bristle Mixing

Highly accomplished labourers aided by sophisticated machines engage in the mixing process with extreme proficiency.

Head Making

The exact amount of bristle is filled and fitted into ferrules using precise wedges to create paint holding void and set with epoxy.

Finishing and painting

Handles are created and painted with extreme precision. An accurate degree of exactness is essential to coat the handle in colors for specific qualities.

Assembling and dispatch

Each brush goes through a mechanized procedure called combing to ensure that no loose hair remains on the ferrules. The hair is then trimmed to level the tips of the paint brush after which the handles are fitted into the ferrules and nailed together.
